

Tax Credits & Incentives

Parker Poe regularly advises clients regarding international, federal, state and local business tax credits and incentives applicable to existing business operations and planned capital investment programs. We assist company project teams managing manufacturing, headquarters, distribution and energy projects, as well as merger and acquisition diligence. Our team has substantial experience representing developers, investors and creditors in transactions involving federal and state new markets tax credits, federal investment tax credits, federal production tax credits, state renewable energy tax credits, and federal and state historic rehabilitation tax credits.

We routinely help clients identify, negotiate, apply and qualify for grants, credits and incentives. As part of this process, we document client and government commitments and resolve compliance issues. For those significant projects with unique transactional requirements, we assist with special legislative solutions. We work closely with our clients to structure projects in the most tax efficient manner and to maximize after tax returns.
